

Your household appliances such as washing machines, heaters, dishwashers, etc. will last longer and consume less anti-scaling.

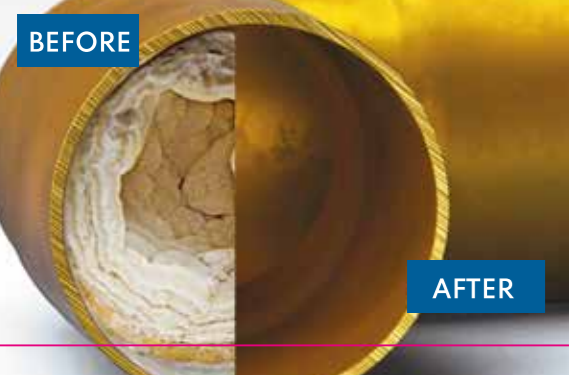

Lime is a losing battle. This is a daily problem that can be eliminated by rubbing but that keeps coming back.

Imagine enjoying perfectly softened water that, instead of making your life hard, will help you take care of and protect your home.

Lime causes incalculable damage. Some damage is visible and some is not. If you live in an area with high water hardness, you may be familiar with this damage.

Toilets and faucets protected and shiny as the first day. Protect your installations and prevent the pipes from scaling up and clogging, thereby increasing energy consumption.

Designed for home and professional applications

Softened water makes a big difference. Showers and baths with softened water are more pleasant: children will appreciate a really foamy bath, their hair will be silkier and easier to detangle. For older children, shaving will be less irritating and the skin will be better hydrated.

Designed according to the requirements of professionals in the water treatment sector.

VDBLACK systems incorporate advanced technology that allows better installation and optimizes their reliability.

The DIRECT ACCESS system makes programming them simpler and guarantees efficient commissioning.

VDBLACK incorporates the revolutionary SAVING REGEN system, state-of-the-art technology.

VDBLACK softeners are designed to produce rapid regeneration thanks to the SPEED REGEN function. In addition, the VDBLACK HIGH FLOW technology prepares the softener to cover 100% of the demand for homes and professional installations.

BY-PASS AS STANDARD: it incorporates a hardness mixer that allows the user to choose the water he wants to consume.

EASY ACCESS TRAY: the accessibility to the brine tank makes it possible to use salt in blocks as well as in dragees.

EASY ACCESS COVER: VDBLACK's design allows for simplified installation and maintenance to reduce costs.

4. DINING ROOMS

Optimize your savings in detergent and maintenance products.

Protect your furniture, sofas and clothes from limescale and its scaling.

Optimize the performance of your kitchen machines.

What is water hardness?

Rainwater that is soft naturally, converts to hard water and fills your facilities and toilets with limestone.

Is the water in your home hard?

If you live on an area of hard water, the limescale generated can cause serious damage to your home. The scale generated can cause serious damage.

60% of households suffer from the harmful effects of the limestone contained in their waters.

70kg of limestone is formed annually in each household.

Benefits of softened water at home
